# PrimeAlert® Responder Mobile

Details and Pricing

Locution
SYSTEMS INC.

Introduction

Long recognized as the industry leader in precision and speed for Fire Station Alerting Systems, Locution provides the ideal mobile app for first responders. Locution PrimeAlert® Responder Mobile provides intuitive, at-a-glance dispatch and mapping information. First responders can readily view the latest dispatch and driving directions, search prior dispatches, and more. PrimeAlert® Responder Mobile is available for iOS and Android devices and also includes the capability for Apple watch notifications.

Basics of PrimeAlert® Responder Mobile
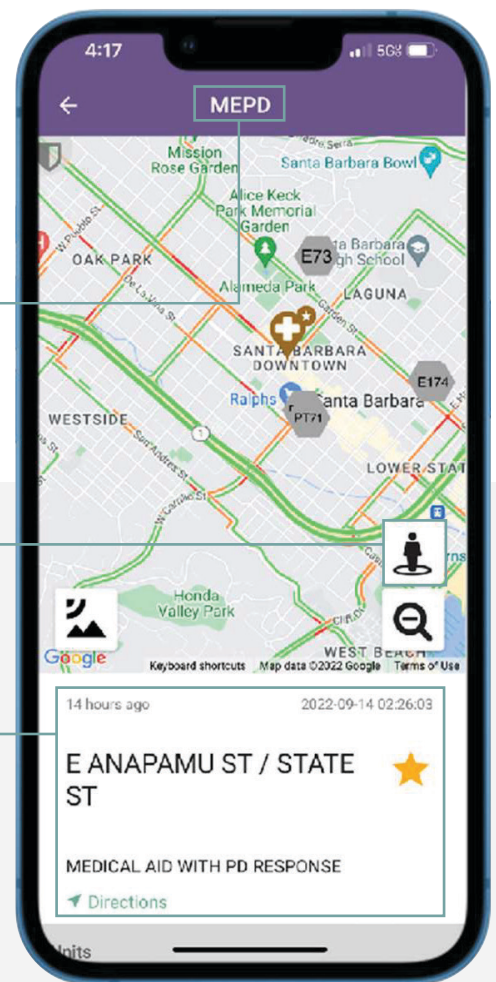

Incident Type

Quickly identified by the marker on the map and the incident number at the top of the screen.

Street View

One touch to view the panoramic street view of incident location.
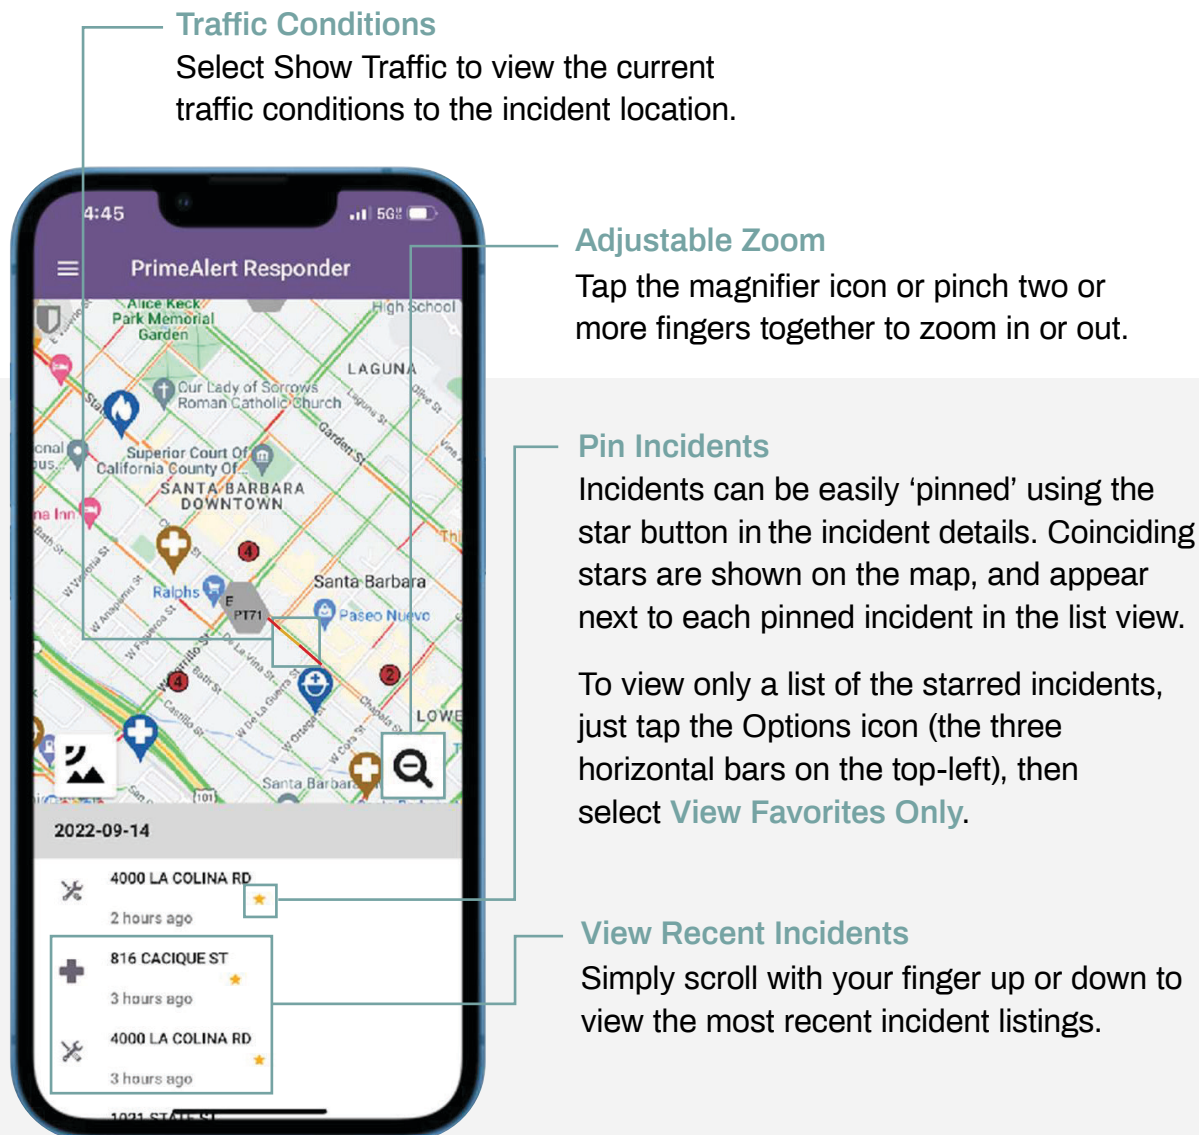

Incident Details

Customize to your city's needs to include: address, date and time, units included in the call, TAC Channel, and dispatcher comments.

How it Works

Locution's architecture is optimized for speed and precision. PrimeAlert Responder Mobile is no exception, interfacing directly with the Computer-Aided Dispatch (CAD) system. The app alerts authorized personnel via smartphones and tables wherever they are, showing them incident dispatch details, including street and satellite views. It also allows users to easily search and retrieve prior dispatches.

Many other display providers have not invested in the direct interface to the CAD, choosing to rely on API integrations such as email. This approach cannot match the speed of a direct interface and can also be much less reliable.
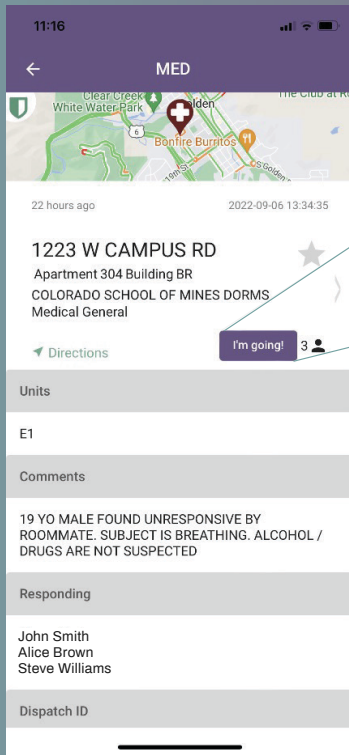

Traffic Conditions
Select Show Traffic to view the current traffic conditions to the incident location.

Adjustable Zoom
Tap the magnifier icon or pinch two or more fingers together to zoom in or out.

Pin Incidents
Incidents can be easily 'pinned' using the star button in the incident details. Coinciding stars are shown on the map, and appear next to each pinned incident in the list view.

To view only a list of the starred incidents, just tap the Options icon (the three horizontal bars on the top-left), then select View Favorites Only.

View Recent Incidents
Simply scroll with your finger up or down to view the most recent incident listings.
