

# Locution PrimeAlert® Administrator Plus

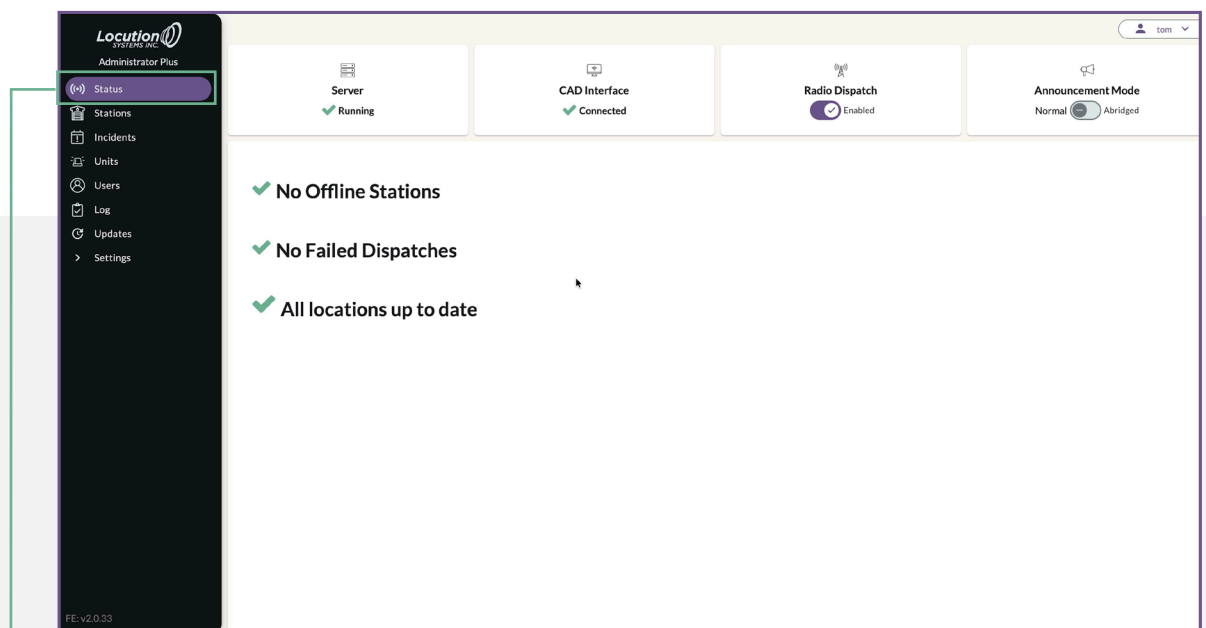

## Introduction

**Locution PrimeAlert® Administrator Plus** software provides dispatchers and administrators with what they need to operate the **Locution PrimeAlert® System**. The upgraded interface matches the intuitive look and feel of **Locution PrimeAlert® Configuration Portal** and **Manager** software.

Dispatchers can readily see the status of the CAD interface and also each dispatch. Administrators can easily create and manage stations, units, users, and settings. **PrimeAlert® Administrator Plus** software provides both the ease of use and powerful capabilities that customers have come to expect from Locution.

## PrimeAlert® Administrator Plus

### View Status

- Easily confirm that the CAD interface is operating, as well as that stations are all online and no dispatches have failed.
- Enable or disable radio dispatches.
- Toggle announcement mode to abridged during peak call periods.

# How It Works: Dispatchers

Locution PrimeAlert® Administrator Plus software is designed to be an intuitive assistant for dispatchers. Dispatchers are able to focus on their primary mission, while the software provides confirmation that everything is working properly, allowing manual intervention whenever needed. Building upon our years of experience with our PrimeAlert® Dispatcher software and incorporating feedback from the dispatchers who use it, Locution has once again set a new standard for ease of use with Adminsitrator Plus.

The screenshot displays the Locution PrimeAlert Administrator Plus software interface. A 'Send Manual Dispatch' dialog box is open, allowing users to configure dispatch parameters. The dialog includes fields for Stations (MZ), Tone, Incident Type, Radio Channel, Assigned Units, Street Address\*, Common Place Name, and Comments. There is also a checkbox for 'Show AVA Codes' and 'Send Dispatch' and 'Cancel' buttons.

Below the dialog, the 'Incidents' section is visible, showing a table of incident records. The table has columns for Time, Status, ID, Address, Type, Units, and Stations. The 'Status' column is highlighted with a green box.

	Time	Status	ID	Address	Type	Units	Stations
<input type="checkbox"/>	2026/02/23 14:39	PROCESSING	F241127047				CORE
<input type="checkbox"/>	2026/02/12 14:47	PROCESSING	F241127047				CORE
<input type="checkbox"/>	2026/02/12 14:46	GOOD	TEST-1-2801				CORE

**Send Manual Dispatches**  
Dispatchers can quickly select tones, incident types, radio channels, and units to send manual dispatches.

**View Incidents**  
Dispatchers can see dispatches that are in process and completed.

# How It Works: Administrators

Administrators need software to help them operate their systems and modify them as their needs change. Creating or editing stations, units, users, and settings have all been made easier now with Locution **PrimeAlert® Administrator Plus**. Configuration changes that have been requested via Locution **PrimeAlert® Configuration Manager** software can be easily accepted and implemented.

## Station Screen

Station	Status	IP	Type	Offline Since	Announcing
CDRE	Online	10.2.0.10	Station		
MZ	Online	10.2.0.18	Station		
PM2	Online	10.2.0.36	PTT Radio		
3-Area	Not monitored	10.2.0.13	Station		
NewMZ	Not monitored	10.2.0.30	Station		

### View Stations

- View all stations and sort by name or status.
- View station details.

## View and Edit Configurations

Administrators can view and change settings for configurations, relays, tones, alarms, etc.

## View and Approve Updates

Administrators can view and accept update requests that are submitted from PrimeAlert® Configuration Manager.

## Locution PrimeAlert® Configuration Portal & Manager

PrimeAlert® Configuration Portal and Manager software are designed to be the companion management software for PrimeAlert® Administrator Plus software.

PrimeAlert® Configuration Portal provides an intuitive, basic file-level overview across the PrimeAlert® solution for partial file validation. Administrators can readily view the software levels that are currently running and request a software update or rollback for an individual station, which is then displayed in Administrator Plus software for approval.

When upgraded to PrimeAlert® Configuration Manager, administrators are able to access the full capability of the software for a more complete, detailed system validation. Administrators can quickly view and change individual configuration settings at specific stations and can also roll back changes. Software and settings can be easily updated or rolled back for multiple stations, and those requests are automatically displayed in Administrator Plus software for approval.

Please feel free to contact us at **303-301-7300** for details on specific software features, pricing, and/or to schedule a demo.
